

Errata Sheet for *Pesticide Safety, A Study Manual for Private Applicators, Third Edition*,
ANR Publication 3383-3

Sections of the *Pesticide Safety, A Study Manual for Private Applicators, Third Edition* are inaccurate. Below is the inaccurate text along with the corrected information. Strikethrough text indicates inaccurate information followed by the respective correct text in **bold and underlined**.

1. Chapter 5. Environmental Hazards

Figure 5-5 Point Pollution Sources. (Page 58).

Figure 5-5 description words were inadvertently listed in Spanish. The appropriate words in English are shown below:

2. Chapter 7. Personal Protective Equipment and Personal Safety

Figure 7-22 Closed Mixing System (Page 91).

~~Closed mixing systems are required when mixing more than 1 gallon per day of liquid DANGER pesticides for the production of an agricultural commodity.~~ **Closed mixing systems are required when mixing, loading, diluting, or transferring liquid formulations of pesticides with certain precautionary statements on the label for the production of an agricultural commodity.** These systems allow you to accurately measure the liquid pesticides. Most also rinse the empty containers (A). This label shows examples of two of the three precautionary statements that require the use of a closed mixing system in California (B). The third one is “fatal if absorbed through the skin”.
